

# Establishing Ultrasound Education in Internal Medicine Residency

Cao, Xinyu; Baskaran, Gautam; Egbe, Tiffany

Shepherd Medical Center, Longview, TX

The University of Texas Health Science Center at Tyler Internal Medicine Residency Program at Christus Good

The University of Texas Health Science Center at Tyler

## INTRODUCTION

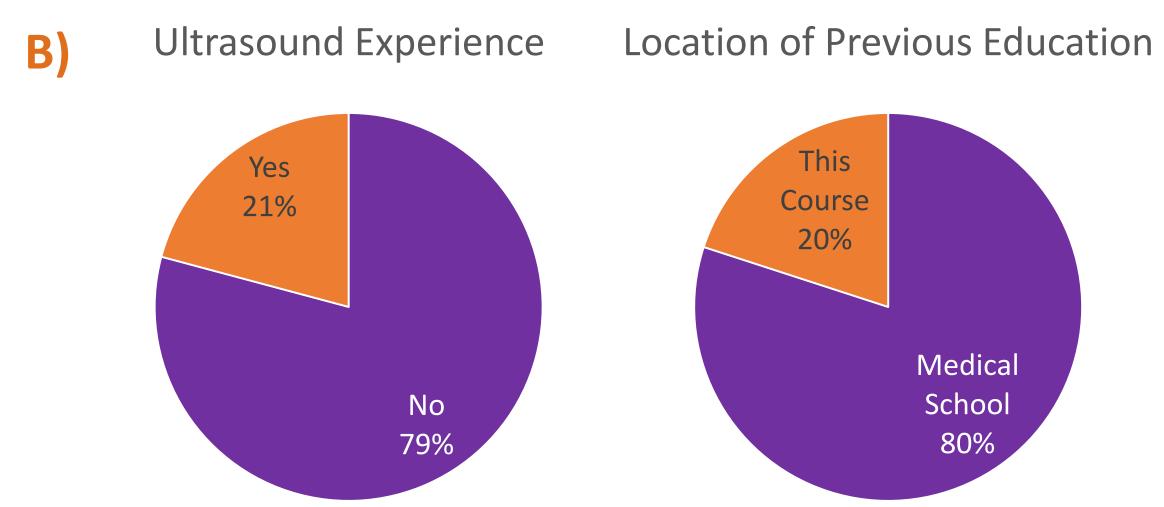

- Ultrasound first described in 1950s, has since become more prevalent in medical practice
- Point-of-care (POC) ultrasound found to increase success of procedures, decrease complications, lower cost, increase patient satisfaction, and improve time to diagnosis
- Aim: To establish POC ultrasound education for residents to improve confidence and knowledge of ultrasound

## **METHODS**

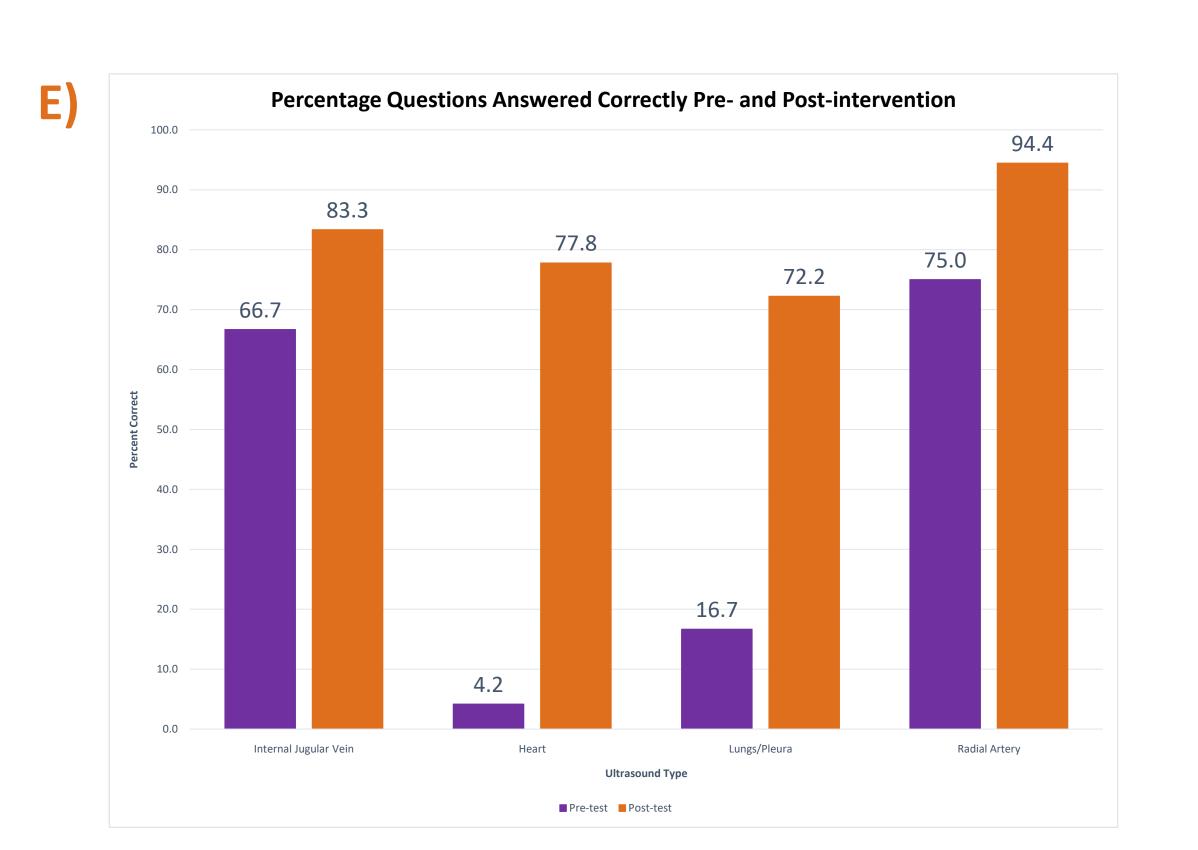

- ICU faculty with ultrasound experience enlisted as teacher
- Participants: Residents who rotated through ICU from August 2019 – February 2020
- Equipment used: Mindray TE7 ultrasound machines from **Emergency and Radiology** departments
- Teaching focused on internal jugular vein, radial artery, lung/pleura, and heart
- Pre- and post-course surveys used to evaluate confidence and knowledge
- Confidence measured using 5 point Likert scale (1 = strongly disagree to 5 = strongly agree)
- Knowledge measured with questions pertaining to ultrasound use for each body area taught

# **RESULTS**

A: Pre- and post- course surveys and evaluations for residents. **B**: Participant experience with previous ultrasound education C: Number of procedures completed by participating residents and number of each procedure performed with ultrasound guidance. (Purple = procedures completed without ultrasound, orange = procedures completed with ultrasound) D: Comparison of resident confidence measurement pre- and post-course with standard error bars

**E:** Comparison of number of correct answers from residents pre- and post-course

#### DISCUSSION

- Overall, residents appeared to have increase in confidence
- Overall, residents had improvement in number of questions answered correctly
- Residents allowed to leave comments: most comments positive about experience but commonly want more sessions
- Limited by anonymous surveys not allowing to follow personal change
- Limited by number of residents
- Possible expansion in future to encompass more uses for ultrasound and more organ systems
- Possible expansion to increase number of sessions/amount of exposure
